

ABB MEASUREMENT & ANALYTICS | DATA SHEET | DS/AZ20-EN REV. R

Endura AZ20 oxygen monitor Combustion gas analysis

Measurement made easy

Superior technology and quality from the world leader in oxygen measurement

Advanced design and precision manufacturing

- Robust, long-life probe for process temperatures up to 800 °C (1,472 °F)
- Proven cell design from over 50 years' experience
- Fast response to process variations
- Stable and accurate oxygen measurement

Unique integrated auto-calibration system

- Easy compliance for emission monitoring regulation
- Reduced installation costs; eliminates requirement for expensive external calibration panel
- Reduced maintenance costs

Probe lengths up to 4.0 m (13.1 ft) and industry-standard flange configurations

- Suitable for a wide range of applications
- Extensive installation options

Easy cell release

- Fully site-serviceable probe
- Easy access to internal components

Advanced transmitters

- Easy configuration, monitoring and intuitive HMI
- HART[®] communications
- Cell performance logging and diagnostics

Introduction

The Endura AZ20 is the latest in a long line of high-quality, combustion gas analyzers from ABB.

The sensor, based on a zirconium oxide cell, is mounted at the tip of the probe that is inserted in the flue duct. The resulting direct, in-situ measurement provides accurate and rapid oxygen reading for combustion control optimization and emissions monitoring.

Advanced design

Designed and manufactured to exacting standards, the Endura AZ20 ensures long periods of trouble-free operation in even the most arduous of applications.

The operating process temperature of up to 800 °C (1,472 °F) extends system suitability into previously impossible applications and enables optimum probe location within the process.

The modular design, with reduced component count, improves the robustness and reliability of the system and simplifies routine maintenance and servicing.

Complete traceability ensures only the highest quality materials are used in the analyzer's construction and rigorous manufacturing, inspection and testing procedures (to international standard ISO 9001) result in a monitor of superior quality with prolonged probe life.

Figure 1 Modular construction

Probe lengths up to 4.0 m (13.1 ft)

A wide range of probe insertion lengths from 0.5 to 4.0 m (1.7 to 13.1 ft) enable installation to the optimum measuring point for accurate oxygen measurement within the duct – even in the largest flue gas ducts and stacks.

A comprehensive range of mounting flanges provide simple installation when plant-wide standard flanges are required or when replacing existing probes.

The transmitter can be probe- or remote-mounted at distances of up to 100 m (328 ft), thus providing versatile system options for all applications. The probe-mounted transmitter option provides the lowest cost of installation. However, the remote-mounted transmitter provides flexibility when the operationally ideal probe location does not provide easy access for the user.

Figure 2 Probe and probe-mounted transmitter

Figure 3 Probe and remote-mounted transmitter

Figure 4 Stainless steel remote transmitter

Easy cell release

The Endura AZ20 probe has retained the easy-access cell arrangement of the previous generation ZFG2 probes. Cell replacement can be performed on-site using basic hand tools, even after long periods of high-temperature operation where screw threads have seized and can no longer be released.

Kits containing all the parts needed to complete maintenance are available from ABB to ensure a technician can perform services quickly, efficiently and at minimum cost.

Proven cell design

ABB's metallurgically bonded, multilayer electrode technology increases the cell's resistance to sulfurous and reducing atmospheres and high-temperature operation. This extends the life cycle of the cell in the most arduous applications, such as sulfur recovery processes, crematoria, and industrial/ clinical waste incineration.

Figure 5 Zirconia cell

Optional flow rate control to the sensor

The correct flow rate of test gas and reference air is essential to ensure the accurate operation of Zirconia-based AZ20 oxygen analyzers.

This is achieved using one of two options:

- Using flow restrictors (no flowmeters required):
 - Flow restrictors fitted in the sensor head guarantee the correct flow of test gases and reference air by applying the gases/air to the probe at a fixed pressure of 1 bar (15 psi).
- Using flowmeters (no restrictors):
- The Endura AZ20 uses flowmeters with flow control valves to regulate the flow of test gases and reference air into the sensor.

Optional corrosion resistant coating

Used in applications where the process temperature is close to the sample acid dew point. This PFA coating protects the probe body against corrosion caused when acids condense out onto the probe. The exact temperature at which this occurs is dependent on the acid gas concentration and the water vapor content of the sample. This option is suitable where the process temperature is below 250 °C (482 °F)

Unique integrated automatic calibration

The all-new Endura AZ20 automatic calibration system eliminates the need for the expensive ancillary equipment required for automatic calibration on traditional flue gas oxygen analyzer systems. ABB's fully integrated, automatic calibration feature controls the test gas sequence and detects test gas availability, eliminating incorrect calibrations due to loss of test gas.

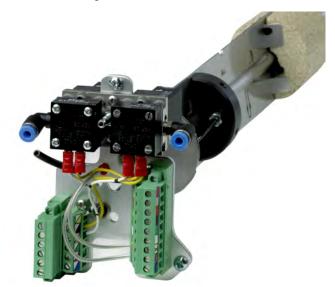

Figure 6 Advanced automatic calibration facility

Integrated automatic calibration secures the oxygen measurement, providing complete confidence in the analyzer's performance.

Long-term operation without technician intervention minimizes operating costs, total cost-of-ownership, optimizes system accuracy and contributes to the CEMS (Continuous Emissions Monitoring Compliance). A significant proportion of service visits to an analyzer result in 'no fault found'. Endura AZ20's high-quality manufacture, advanced diagnostics and fully integrated, automatic calibration is targeted at reducing this wasted effort and cost.

The AutoCal option can be used with or without the flow restrictors option.

Filter options

An optional large surface area filter for high dust applications is available and can be easily retrofitted if required.

Figure 7 Large surface area filter

Advanced transmitter

The Endura AZ20 transmitter incorporates the most up-todate design and technology available today.

ABB's universal human-machine interface (HMI), with its large, clear, backlit graphical display, 'through-the-glass' control and intuitive menu structure, simplifies transmitter configuration and operation.

The user-friendly interface enables fast, easy data entry for all parameters and the 'Easy Setup' menu speeds and simplifies system commissioning.

Advanced diagnostics, in accordance with NAMUR NE107, classify alarms and warnings as 'Maintenance Required', 'Check Function', 'Failure' and 'Out-of-Specification'. Cell performance is monitored by the transmitter. Indicators such as cell impedance, rate-of-response to test gases and changes in calibration offset/factor are recorded and analyzed. The current cell 'quality' is displayed by the transmitter as a visual indication of the measurement confidence, providing the operator all the information required to keep the monitor operating at peak performance.

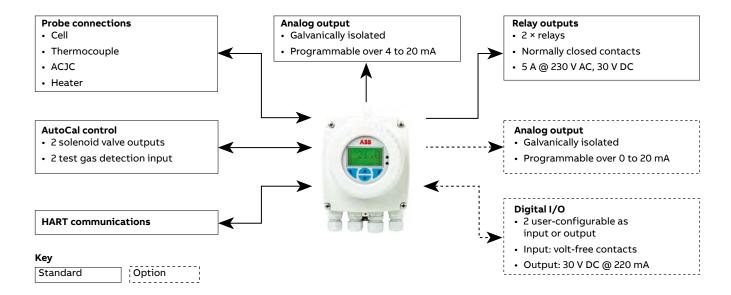

The performance log holds up to 100 time-stamped events. When the log is full, the oldest data is overwritten by new entries. The log contains details of measurements and coefficients for all calibrations and accuracy checks.

Two relay outputs and a traditional analog output are fitted as standard, with the option of adding a second analog output or two digital inputs/outputs (I/O). The Endura AZ20 transmitter is equipped with HART communication as standard, supported by a full Device Type Manager (DTM) to enable remote access to the analyzer through a user-friendly graphical interface. The DTM provides full access to the transmitter setup, logged data and diagnostics information as well as live data.

The IrDA standard infrared communication port can also be used with the DTM to upload and download device configurations. In addition, it enables data logged values and diagnostics to be viewed on a hyperterminal interface or a PC. The device's firmware can also be upgraded using this port.

Probe with integral transmitter

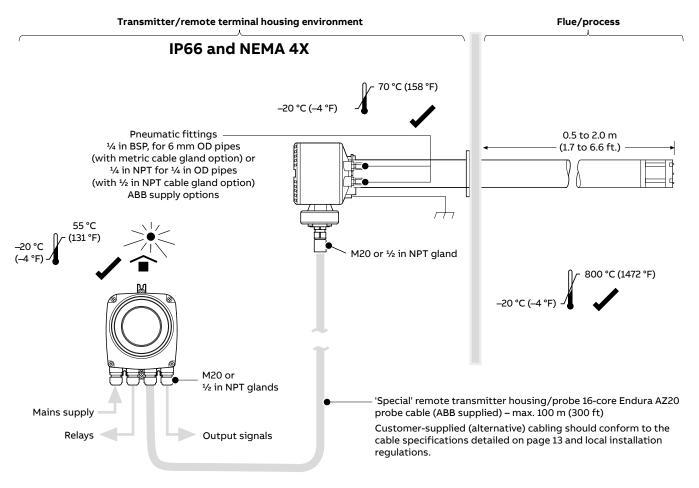

*Designed to withstand 35 kPa (5.1 psi) – positive or negative pressure.

Pressure compensation required above 5 kPa (0.7 psi) - transmitter can supply fixed pressure compensation

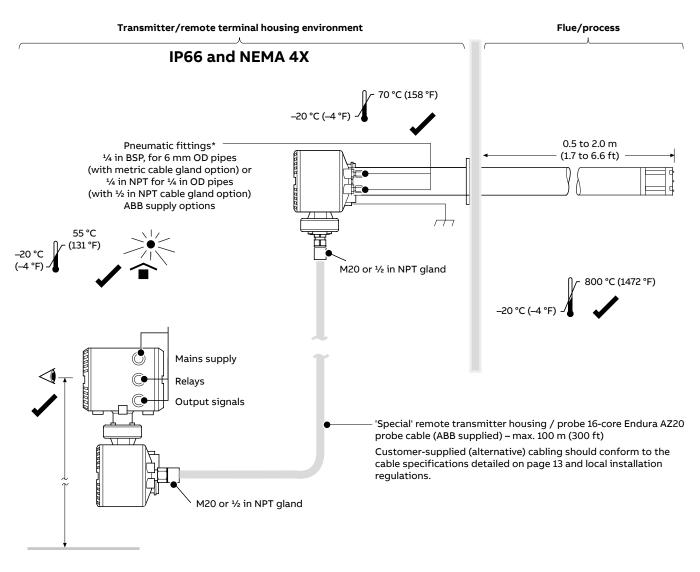

**Transmitter does not contain a reference air supply for the probe.

...AZ20 system options

Probe with remote transmitter

Probe with remote transmitter (stainless steel)/terminal housing

Bypass system

This accessory enables standard AZ20 or AZ30 sensor systems to operate in high temperature environments of up to 1,400 °C (2,552 °F) without compromising their hazardous-area certification.

An air-powered ejector draws sample into the bypass system, passes it over the sensor and then returns it to the process.

Requirements for non-ABB supplied cable/conduit

Screens and drains:

• Heater wires must be sleeved separately from the screened signal cables.

Heater cores (items 1 and 2) and heater drain

- Heater cores: 0.75 mm², 24/0.2 Cu wire, resistance (20C) 26 Ω/km max.
- Heater drain: 0.5 mm², 16/0.2 Cu wire, resistance (20C) 39 Ω/km max.

Signal cores (items 3, 15) and signal drain

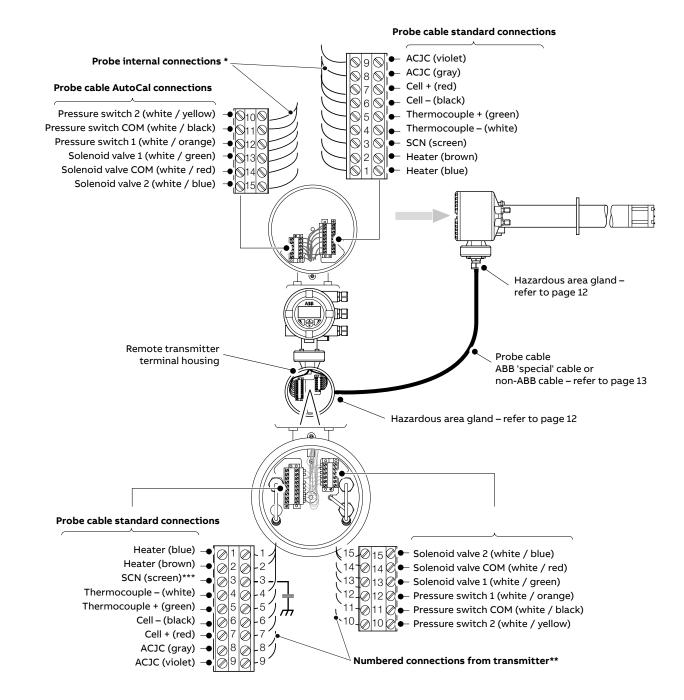

- Signal cores/signal drain: 0.5 mm², 16/0.2 Cu wire, resistance (20C) 39 Ω /Km max.

Voltage rating

- 300 V to earth.
- 500 V between cores.

Cable (non-ABB supply) operating temperature requirements

• -20 °C (-4 °F) min.; 80 °C (176 °F) max.

*Probe internal connections already made at the factory.

Numbered connections from the transmitter to the transmitter's terminal housing already made at the factory. *Screens must be connected to terminal 3 in the remote terminal housing where they are earthed via a de-coupling capacitor. Screens must not be connected directly to earth elsewhere.

Probe body material

316L stainless steel

Mounting angle

Horizontal to vertically down

Note. Horizontally-mounted probes greater than 2.0 m (6.6 ft) in length may need to be supported.

Process conditions

Standard process temperature

All probe lengths* –20 to 800 °C (–4 to 1,472 °F)

Process pressure

Designed to withstand 35 kPa (5.1 psi) – positive or negative (pressure compensation required above 5 kPa (0.7 psi) – transmitter can apply fixed pressure compensation)

Operating requirements

Reference air

Regulated supply	Probes with restrictors	1 bar (15 psi), flowmeters not required
	Probes without restrictors	1 bar (15 psi) flowmeters required with flow set to 0.3 to 0.5 L/ min (0.64 to 1.06 scfh)
Pumped	Probes	Preset flow

supply with/without restrictors

Preset flow 0.3 to 0.5 L/min (0.64 to 1.06 scfh)

Test gas

User-selectable, 100 to 0.1 % O2 balance N2 and/or air (air is recommended as one of the test gases)

Probes with
restrictors1 bar (15 psi) – flowmeters not required
as restrictors preset flow to 2.2 L/min
(4.662 scfh)Probes without1 bar (15 psi) – flowmeters required,

restrictors set to 2.2 L/min (4.662 scfh) flow

Calibration

Manual, semiautomatic or automatic (controlled by Endura AZ20 transmitter)

Automatic calibration

AutoCal hardware

- Optional built-in solenoid valves for control of test gas flow
- Built-in pressure switches to detect presence of test gases

Heater operational requirements

AZ20 Probe

Nominally 190 $\Omega,$ 70 W at 115 V AC – power is limited to 70 W max. by AZ20 transmitter over an 85 to 265 V AC range

*

Transmitter specifications

Transmitter enclosures

Remote

Wall-, pipe-, or stand-mounted 4 gland entries Optional ½ in NPT, M20 Integral Head-mounted 3 gland entries

Optional ½ in NPT, M20

Automatic calibration

AutoCal hardware

- Isolated solenoid valve control as standard, 24 V @ 2 W per valve*
- Dedicated isolated digital inputs to monitor pressure switch contacts as standard voltage-free, normally closed with gas present

Display and switches

Display type

Graphical 128 × 64 pixel LCD

Display backlight

Green LED

Operator switches

4 capacitive switches (operated through the front glass)

Relay outputs

Number

2 standard

Туре

Normally closed, 5 A @ 230 V AC

or 30 V DC (non-inductive)

Functions

User-configurable – can be activated by one or more of the following signals:

- Process alarm 1, 2, 3, 4
- Calibration in progress
- Calibration failed
- Out of test gas 1, 2
- Test gas 1 valve control
- Test gas 2 valve control
- Failure diagnostic
- Out-of-specification diagnostic
- Maintenance required diagnostic
- Function check diagnostic

*

Analog outputs

Standard

- 1 isolated current output
- Programmable to retransmit oxygen (linear or logarithmic) or temperature
- Programmable over 4 to 20 mA
- Over-range capability to indicate system failure
 programmable from 4 to 22 mA

Optional

- 1 isolated current output
- Programmable to retransmit oxygen (linear or logarithmic) or temperature
- Programmable over 0 to 20 mA
- Over-range capability to indicate system failure
 programmable from 0 to 22 mA

Digital inputs/outputs

Number

2 (optional)

- Туре
 - User-configurable as either input or output

Input

Volt-free contact

Output

- Transistor switch capable of sinking 220 mA
- Low output, < 2 V DC
- Switch voltage 30 V DC maximum

Isolation

Not isolated from each other or from other circuitry

Input functions

- User-configurable for:
- Automatic calibration start
- Automatic calibration stop
- Automatic calibration start/stop

Functions

User-configurable – can be activated by one or more of the following signals:

- Process alarm 1, 2, 3, 4
- Calibration in progress
- Calibration failed
- Out of test gas 1
- Out of test gas 2
- Test gas 1 valve control
- Test gas 2 valve control
- Failure diagnostic
- Out-of-specification diagnostic
- Maintenance required diagnostic
- Function check diagnostic

...Transmitter specifications

Hart communications

Version

5.7 as standard

Integration

- Device Type Manager (DTM) and Electronic Device Description (EDD)
- Provide online/offline device configuration, online monitoring of measurement values and diagnostic states

DTM

- FDT v1.2.1 compliant
- Works with FDT framework packages
- (for example, ABB Asset Vision Basic)

EDD

Compliant with suitable framework tools (for example, SDC 625 and Simatic PDM tools)

Infrared service port

Accessibility

Through front face

Type:

IrDA standard

Baud rate

Up to 115 K baud

Functions

- Firmware update
- Remote HMI
- Diagnostic log download
- Datalog output
- HART via IrDA

Languages

- English German French
- Spanish Italian

Calibration

Manual calibration

- 1 point (offset)
- 1 point (factor)
- 2 point (offset + factor)

Automatic calibration

- 1 point (offset)
- 2 point (offset + factor)

Calibration control

- Front panel controls
- Digital inputs
- HART commands
- User-defined schedule

Calibration scheduler

User-defined schedule enables automatic calibration frequency to be set from 1 day to 12 months

Part numbers for Endura AZ20 replacement heaters, spare cables, thermocouple/electrode assemblies and ABB flowmeters

Table 11 Endura AZ20 – standard heater assembly

Probe length	Part number
0.5 m (1.7 ft)	AZ200 710
1.0 m (3.3 ft)	AZ200 711
1.5 m (5.0 ft)	AZ200 712
2.0 m (6.6 ft)	AZ200 713
2.5 m (8.2 ft)	AZ200 714
3.0 m (9.9 ft)	AZ200 715
3.5 m (11.5 ft)	AZ200 716
4.0 m (13.1 ft)	AZ200 717

Table 14 Thermocouple/electrode assembly

Probe length	Part number
0.5 m (1.7 ft)	AZ200 701
1.0 m (3.3 ft)	AZ200 702
1.5 m (5.0 ft)	AZ200 703
2.0 m (6.6 ft)	AZ200 704
2.5 m (8.2 ft)	AZ200 705
3.0 m (9.9 ft)	AZ200 706
3.5 m (11.5 ft)	AZ200 707
4.0 m (13.1 ft)	AZ200 708

Table 12 Endura AZ20 spare cables

Length	Part number
5 m (16.4 ft)	AZ200 141
10 m (32.8 ft)	AZ200 142
25 m (82 ft)	AZ200 143
50 m (164 ft)	AZ200 144
75 m (246 ft)	AZ200 145
100 m (328 ft)	AZ200 146

Table 15 ABB flowmeters NPT/BSP

Flowmeter type	Part number
¹ ⁄ ₄ NPT flowmeter (reference air): 0.1 to 0.85 L/min (0.21 to 1.8 scfh) STP	AZ200 786
¹ / ₄ BSP flowmeter (reference air): 0.1 to 0.85 L/min (0.21 to 1.8 scfh) STP	AZ200 787
¹ ⁄ ₄ NPT flowmeter (test gas): 0.6 to 4.4 L/min (1.27 to 9.32 scfh) STP	AZ200 788
¹ / ₄ BSP flowmeter (test gas): 0.6 to 4.4 L/min (1.27 to 9.32 scfh) STP	AZ200 789

Table 13 Endura AZ20 spare CSA cables

Length	Part number
5 m (16.4 ft)	AZ200 431
10 m (32.8 ft)	AZ200 432
25 m (82 ft)	AZ200 433
50 m (164 ft)	AZ200 434
75 m (246 ft)	AZ200 435
100 m (328 ft)	AZ200 436
